

Chasing Richard Serra's Verbs

Searching the MET's collection through the eyes of an artist.

Richard Serra, the sculptor famously said “Drawing is a verb”. Can a search using a verb uncover the processes artists ‘do’ to make art?

Alfred Dedreux (1810-1860) as a Child ca. 1819-20 Infrared reflectography shows a different composition beneath the portrait, and with the canvas **rotated** 90 degrees to the right. The infrared reflectogram (see fig. 1 above) shows a turbaned black groom leading a saddled, bridled horse in a desert landscape with, at left, a pyramid and a palm tree and, at right, a pyramid.

Belisarius and His Guide 1794 Bronze, mounted in a bronze circlet with floral ornament painted to resemble gilt bronze, into which is fitted the original **rotated** mechanism

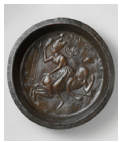

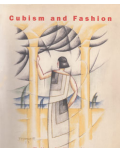

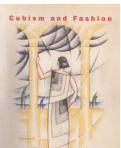

Plate with Wife Beating Husband ca. 1480 The object to the left in this plate represents the method of spinning wool by hand from a fixed distaff (which had the advantage of leaving both hands free, one to **rotate** the spindle and the other to draw out the fibers).

Cubism and Fashion Martin, Richard (1998) Cubism's essential role in the development of twentieth-century art, specifically through the innovative work of Pablo Picasso, Georges Braque, and others beginning about 1908, has been widely recognized for many years. The flat planes, indeterminate space, cylinders, cones, **rotation**, and use of collage in Cubist art revolutionized painting and sculpture, turning three-dimensional illusionism into abstract concept.

Terracotta spindle whorl 6th-5th century B.C. Like the two onoi (06.1021.52, 10.210.13) displayed nearby, this spindle whorl is a specialized piece of equipment used in working wool into thread. Carefully shaped and painted, it would have been attached to one end of the spindleleto make it easier to **rotate**. Such objects were appropriate indeed for the graves of women.

Vase with historical warriors On view during **rotation** 1 of exhibition from June 25, 2016 through January 13, 2017.

Colt Paterson Percussion Revolver, No. 5, Holster Model, serial no. 940 ca. 1840 In 1835 and 1836, the American inventor and industrialist Samuel Colt (1814-1862) patented a revolutionary type of multi-shot pistol that is still used today. Colt's revolvers had a **rotating** cylinder that could be loaded with several rounds and fired quickly by cocking and releasing the hammer or, in later models, by simply pulling the trigger.

Bottle with Cut Design 7th-8th century The white lines on the surface of this small bottle were engraved with a **rotating** device. This decorative technique carries on the tradition of late Roman vessels engraved in a similar fashion.

Aquamanile in the Form of Samson and the Lion ca. 1380-1400 The large lion does not convey the struggle with Samson by the position of its torso or legs, but the beast **rotates** its head nearly 180 degrees to confront his opponent. Like Samson's hair and beard, the lion's tufted mane is vigorously engraved. Somewhat later than the examples we have seen from the north German groups, this aquamanile is more difficult to localize with any precision.
